

Like adding  
**Power  
Steering**  
to your bike!

**W**e've long been fans of oversized footpegs. The additional control they give your bike, and the increased comfort while standing, make their design a no-brainer for any serious rider.

Measuring an massive 4.25" long by 2.5" wide, our **Platform-Style Adventure Footpegs** provide an extremely stable base from which to control your bike—even over the gnarliest terrains. Their rugged design is cut from aircraft-grade aluminum, and like cat claws on a carpet, precision cut traction cleats provide a grip that'll hold you on the pegs. They're extremely lightweight, too, at only 8 oz. each.

To make assembly a breeze, an ingenious *installation pin* is included with each set of footpegs. If you've ever fought the return spring while installing footpegs, you'll know why this tool is worth its weight in GOLD!

And just for fun, a handy BOTTLE OPENER is built into each peg for convenient access to your favorite cold beverage after a long day's ride.

### **BDCW's Platform-Style Adventure Footpegs are available for these bikes:**

- BMW R1200GS Adventure (all years).
- BMW R1150GS, R1200GS (all years), F800GS, F650GS twin. (Does NOT fit the F650GS/G650GS single without modifications.)
- Triumph Explorer 1200.
- KTM 990 Adventure.
- KTM 950 Adventure.
- KTM 950 Super Enduro.
- All KTM two-stroke and four stroke dirt bikes after 1998 including 125 thru 530 and possibly other models as well. (Does not fit 625/640/690 models.)

# Black Dog: Adventure KTM Footpegs

by Ron Lieback | January 11, 2012 | Ultimate MotorCycling

**Black Dog Cycle Works (BDCW)** has released a new line of all aircraft alloy footpegs for all *KTM Adventure* and dirt motorcycles.

Kurt Forg t (**BDCW** partner) says: "From our experiences, we recognized that having an enlarged footpeg provides the rider with greater control of the bike. It's like adding power steering to the motorcycle.

"The *Adventure Footpegs* are designed to provide the rider with greater foot comfort, bike control and made from an aircraft alloy to be ruggedly durable. And we didn't stop there, we even designed in a built-in bottle opener to the bottom of each footpeg, so the rider can carry one less item and always have easy access to refreshments at the end of the day."

**BDCW**, the industry leading manufacturer in *KTM* and *BMW* rugged skid plates and other hard parts, has taken from their experiences, as well as other contributing riders/racers, to develop this new enlarged *Adventure Footpeg*, which weighs in at only 8 oz. each.

The footpegs, manufactured in the U.S.A.,

measure a large 2.5" wide by 4.25" long. The traction cleats are designed to provide that optimum balance between best grip for secured footing and comfort.

The footpegs are designed to fit all *KTM* off-road motorcycles, including all *Adventure* models. For bike control and rider comfort, especially in long stand-up positions, the **BDCW Adventure Footpegs** cannot be beat.

They are also the only footpeg in the world with a bottle opener designed right in. **BDCW Adventure Footpegs** are available in a natural machine finish for \$199 per set. Anodized versions expected to be released later.

**BDCW** also has in production *Adventure Footpegs* for the *BMW R1200GS/GSA*, *F800GS*, *F650GS* and *G650GS*, which are expected to be available for ordering in February 2012.\*

The **BDCW Adventure Footpegs** are available through **Black Dog Cycle Works** at **[BlackDogCW.com](http://BlackDogCW.com)** or by calling (208) 263-0438.

\*Now available!

# Black Dog Cycle Works Adventure Footpegs

Thrashed | Ridden and Rated

Motorcyclist | December 2012

Finally floorboards for adventure bikes! Not really, but that was my first thought after installing the **BDCW Adventure Footpegs** on our *BMW F800GS* test bike. The stock pegs on the *BMW F800GS* measure 1-5/8 inches by 3 inches (41mm/77mm). Respectable for a stock set of pegs, but if you stand for even a modest period of time riding in light-soled crossover boots like the *Sidi Adventures*, you will find your feet getting fatigued very quickly. In the spirit

of all products produced by **Black Dog Cycle Works** (which seems to go by the credo, "Anything worth building is worth over-building") these footpegs are no exception. The "Made in the U.S.A." **BDCW Adventure Footpegs** are milled from a single stock of aluminum with the cleated area measuring at an impressive 2-3/8 inches by 4-1/2 inches (61mm/114mm).

These things are HUGE, but wow, do they work awesome. The edges are cleated with a medieval castle pattern that gives great grip in the mud, and after two months of use they have not left any excessive wear marks on the soles of my boots. And, for those that like multi-functional equipment, each footpeg even has a bottle opener milled into the bottom. How's that for bragging rights around the campfire?! No question, these babies are two thumbs up!!—BT

## What the off-road and adventure riding communities are saying:

"These are fabulous footpegs. The incremental size increase and the grip of the peg makes for a very comfortable and responsive addition. And made in the U.S.A. Looks great on a German bike. Tough!!"

—**HD Steve** (ADV Rider blog)

"Your footpegs are awesome. Your pics on the website don't do them justice. Attached a pic that should be included."

—**Evan Hill**

"I just installed your footpegs. You are awesome. WOW, really nice pegs. Great satisfaction, my bike has most of your accessories."

—**Jose "Pepe" Trueba**

"The new pegs work well with my short legs—allows me to gain better position while standing up, and a big plus was the right foot is able to move out on the peg from the exhaust just enough to get some much needed air that area. Keep up the good work."

—**Scott Moulden**

"Just installed my **BDCW** footpegs. I don't know exactly what I was expecting, but these pegs are **Really Great!** Better than I imagined! Easy install on my *F800GS* (10 minutes with distractions, like—trying out the bottle opener)."

—**Fractalsource** (ADV Rider blog)

## Black Dog Cycle Works

### KTM Footpegs and BMW R1200GS Skidplate

Hot on the heels of what promises to be an exciting year for adventure riding, Black Dog Cycle Works has introduced two new products strengthening their specialization of the BMW and KTM markets. Each peg weighs only 8 ounces (226 grams), measures a large 2.5" wide by 4.25" long and is designed to fit all KTM off-road and Adventure models. They even have a built in bottle opener for post ride refreshments.

Pulling from their KTM design experience, Black Dog developed the most advanced rugged skid plate available for the BMW R1200GS/GSA. Black Dog Cycle Work's Rugged Skid Plate is designed to mount the rear of the

skid plate vertically from the frame, completely isolating the rear of the engine case from impact. Large rubber "Shok Bloks" have been added between the skid plate and engine to absorb the energy of significant impacts. To make service easier, only six same-sized bolts are required to remove the plate for oil changes.

Black Dog Cycle Works

## Black Dog Cycle Works KTM Footpegs

by Bill Brennan

Black Dog Cycle Work's KTM footpegs are a winner. I knew just after purchasing my KTM 990R that I was going to have to replace the footpegs because they were too darn small. The light and tough BDCW footpegs are made of aircraft aluminum and installation was a snap. Within ten minutes the Black Dog footpegs were mounted and ready for testing using nothing more than a pair of pliers.

The foot print measures 2.5" wide x 4.25" long which I found to be ample real estate for my size 13 boots and a large improvement over the stock footpegs. Cueing the bike by applying pressure to these beauties really enhanced handling on single track, high-speed sand whoops and on extended highway jaunts. The large surface area covered with traction cleats offers a secure feeling while standing, especially in technical sections. Traction was excellent against my smooth sole adventure boots.

While hanging out after a full day of riding, almost everyone commented on how these new units look—nothing like a little understated bling on an adventure bike. The built-in bottle opener located on the bottom side of the footpegs made for a nice conversation piece and came in handy for a few riders who were opening their favorite bottled beverages before discussing the day's ride.

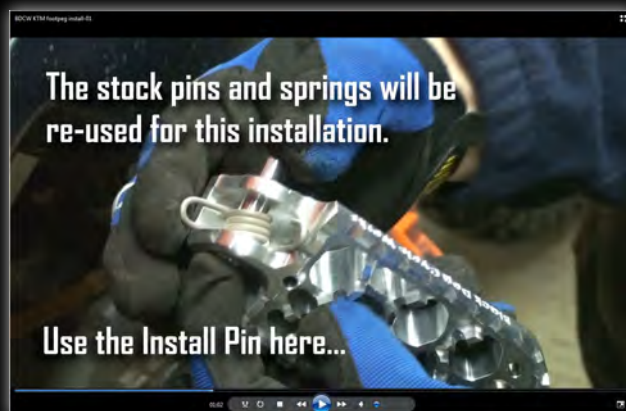

If you have a KTM adventure bike and can't quite get comfortable on the machine because the stock footpegs are too small then consider the Black Dog Cycle Works offering. [blackdogcw.com](http://blackdogcw.com)

### PROS

-  Large surface area that offers great grip
-  Bottle opener built into the underside of the footpeg
-  Competitive price

### CONS

-  No anodized color options
-  No height adjustment offered by some competitors
