

KTM 950 Adventure and 990 Adventure/Baja

The stock *KTM* “splash guards” are a joke—at best, a false sense of security. Do yourself a favor and upgrade to REAL ARMOR!

BDCW has been producing and reining this skid plate for over eight-years. Don't accept imitations—only the original **BDCW** skid plate offers the ULTIMATE protection for your *KTM*:

- Our ULTIMATE skid plate covers more of the dangerously exposed lower front end of the 950 and 990. Protection vital to the sensitive components located at the bottom of the engine, including the engine case, clutch cover, ignition cover, and the side-stand switch.
- Thicker material in the front and rear mounting tabs makes this already tough design even more bulletproof.
- Strategically placed rubber “Shok Bloks” help absorb those really BIG hits and to protect the mounting points.
